Audience District Leaders

Session Type Successful Practices

Title California's Quality Schooling Framework

Description This session provides information about the California Department of Education's Quality Schooling Framework (QSF). The QSF is a conceptual model for describing, gauging, and supporting a school's effectiveness. Rather than an underlying rationale for a checklist or set of mandates, it is a holistic model that connects critical dimensions of quality schools to help educational leaders figure out what is or is not working to support student success in their schools. It provides practical research and evidence-based practices to support planning and implementation of strategies to strengthen the human, fiscal, and organizational environment of a school. The QSF exists as an online tool that may be used by educational leaders to support effective school and district planning. This session offers a state level perspective on how research and resources can be brought together to support effective schooling.

Relevance The QSF is a readily-available and well-researched tool that can be accessed online and is immediately relevant to any school, whether identified as high-performing, low-performing, or somewhere in between. It supports the conference theme of change through its emphasis on implementation.

Research Base The QSF was developed based on effective schools research. A brief narrative for each component of the QSF includes research references.

Other Proposals [PB38D2: Reflecting on School Improvement Grants: California's Experience Improving Schools](#) (Submitted)

Presenter #1

Janelle Kubinec, Director of National, State, and Special Projects, WestEd, Sacramento, CA

Topic Expertise
